Description

NOVA-L is a diffusion grille. The product is intended for air supply and air extract. The product is installed into rectangular ducts or into walls and ceilings. The grille can be split into several parts and installed in a continuous line of grilles. For a balanced distribution of air through the entire grille it is recommended to use the R1-NOVA damper or a plenum box. The field of application is industrial and commercial premises with higher emphasis on appearance.

Highlights

- Single or double layer. With two layers, adjustable inner blades for well-shaped air discharge pattern
- With an option to create a continuous line of grilles
- Design with emphasized aesthetics

List of Accessories

- ODEN: Plenum Box with Basic Air Adjustment for NOVA
- R1-NOVA: Damper for NOVA
- UR-NOVA: Mounting Frame for NOVA

Mounting

The NOVA-L grille can be mounted directly on a rectangular duct using countersunk screws (type "1" mounting), on a wall using a mounting frame and spring clips (type "2" mounting + UR) or, if appropriate, it can also be placed onto a wall and a ceiling using a mounting frame and a mounting mechanism (type "3" mounting).

Design

NOVA-L is manufactured from anodized aluminium profiles. The product consists of a frame and 1 or 2 layers of blades. The first layer is always fixed, the second is adjustable. Single layer grilles can have both horizontal and vertical front blade alignment. Double layer grilles are available only with horizontal front blade alignment. The blades of the second layer are always perpendicular to the first layer. The front blades shape and axial pitch is optional. The blades of the second layer are always shape type "4" with an axial pitch 20 mm. The product is provided in anodized surface finish or powder painted to RAL9003 (signal white) as standard. Other RAL colours are available upon request.

Product Parts

A: Mounting type 1, the grille directly attached with the wall mounting frame and to the building structure by screws.

B: Mounting type 2, the grille attached to the wall mounting frame by spring clips. The wall mounting frame fixed to the building structure by screws.

Legend

NOTES:

1. The plenum box ODEN-F for the grille of the size 200 mm × 100 mm is available only with rear duct connection orientation, type 1. The lateral connection orientation type 2 is not possible.
2. In case the front row blade alignment – horizontal (H) or vertical (V) – is not specified in the ordering code, the product with a horizontal blade alignment (H) will be delivered as default.
3. In case the RAL surface finish is not specified in the ordering code, the product will be delivered with a natural anodized surface finish as default.

Example of Ordering Code

NOVA-L2-2-400x200-1-12-SW

Fixed blade grille with two rows of blades, first with blade axial pitch 12 mm. Mounting with spring clips, intended for a structural opening with dimensions 400 mm × 200 mm, the front row of blades horizontally oriented. Signal white powder paint RAL9003 surface finish.

Accessories

ODEN-F

Plenum Box

Description

ODEN-F is a plenum box intended for both air supply and air extract. It can be used along with the NOVA-A grilles for the supply air flow velocity reduction and a better distribution (optimizing) of the air flow through the grille with possibility to adjust and measure the air flow volume.

Design

The ODEN-F plenum box is manufactured from galvanized steel sheet with a rear or lateral side mounted circular duct connection with a rubber gasket. The plenum box is equipped by a cylinder-shaped perforated adjustment damper in the connection spigot. A measurement probe on the damper enables supply or extract air flow measurements readable outside the box by pressure impulse tubes. The damper can be adjusted from outside the box by a pulling cable mechanism. The measurement and adjustment requires no additional mounting tools.

R1-NOVA

Damper for NOVA

Description

R1-NOVA is a damper for NOVA grilles. The product is intended to balance distribution of air through the entire grille. The product is intended for air supply as well as for air extract. The damper changes the air flow using its regulating wheel.

Design

R1-NOVA is manufactured from galvanized steel sheet. The product consists of a frame, adjustable blades and a regulating wheel. The regulating wheel is operated by a flap tip screwdriver. The blades are opposed and interconnected. The blades angle controls the air flow. The product is provided without any additional surface finish.
