

Chiller

SyScroll 85-135 Air NEW

Air Cooled Water Chillers Cooling Only, Heat Pump
Engineering Data Manual

84 to 132 kW

88 to 135 kW

Key point

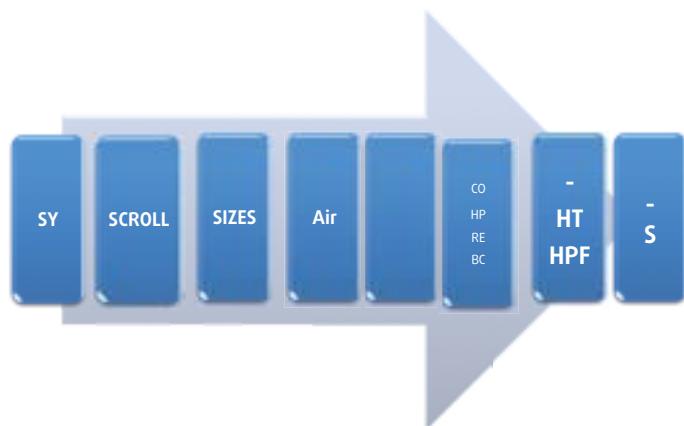

General

SyScroll Air have been designed and optimized to work with [R410A refrigerant](#). As near azeotropic mixture it behaves like a homogeneous substance ([reduced service problems in case of leakage or re-charge](#)) with negligible temperature glide.

- Units with high seasonal performances ([ESEER up to 4.4](#)).
- With except for the fans, all the versions keep the same configuration of the base units (same structure, electrical board, compressors and coils). [Easy upgrade of the units in stock or on the field](#).
- [Electronic expansion devices](#) on all units: superheating value controlled by microprocessor, simple and accessible refrigeration system especially for heat pump versions with reduction of brazing points and than possible leakage.
- New [Microchannel coils](#) for Cooling only version.
- [Compressors box \(less sound proofing\) always installed](#) - additional compressors jackets only for S version ([easy upgrade of the units in stock](#)).
- High Temperature Version (HT) developed for high ambient temperature but also providing high seasonal efficiency (ESEER higher than and high operation limits with inverter fans (electronic brushless type motor).

- Special version (HPF) for high external static pressure (max. 120 Pa) with inverter fans (electronic brushless type motor).
- [New microprocessor](#): 4 times greater RAM memory compared with previous version, flash memory card and compressors envelope curves put inside, 3 times faster than previous control.
- [Hydro kits](#) with or without buffer tank (205 l from 85 to 105 size, 320 l from 120 to 135 size). One or two water pumps are available: standard pressure (100 kPa) or high pressure (200 kPa).
- For service operation, special valves dedicated to R410A are supplied on the refrigerant system. These valves, of 5/16" flare SAE type, are mounted on the liquid line, discharge, suction line and on the gauges manifold of the unit.

Specifications

CO = Cooling Only; HP = Heat Pump; RE = Remote Evaporator; BC = Brine for Process Cooling.

General

The new **SyScroll Air** units have been designed to operate with **HFC 410A** refrigerant. Both compressors and heat exchangers (plate heat exchanger and coils) have been optimized for this refrigerant.

They consist of a **single refrigerant circuit** equipped with a tandem complete with high efficiency and low vibration level Scroll compressors, a **single circuit** plate heat exchanger and a ventilating unit comprising V-shape coils and quiet fans; each of them is located in an externally mounted nozzle profile housing generating low sound level.

Syscroll Air CO units are available in **5 sizes**, with a nominal capacity range from **84 to 132 kW**.

SyScroll Air HP units are available in **5 sizes**, with a nominal capacity range from **79 to 125 kW** in cooling mode and from **85 to 133 kW** in heating mode.

SyScroll Air (**Standard**) version can be supplied with **2 acoustic options**:

- **Basic Low Noise (-)**: The units are equipped with **delta connected fans** implying a standard rpm. The chillers are not supplied with fan speed controller, but fitted with **compressors box** to reduce the noise emissions.
- **Super Low Noise (S)**: The units are equipped with **star connected fans**, fitted with a speed controller which allows the units to operate with a very low rpm. The chillers are supplied with **compressors box** and **soundproof jackets** on compressors reducing significantly the noise emissions.

To increase their field of applications, the SyScroll Air ranges are available in **2 additional versions**:

- **HT (High Temperature) version**: It has same equipment as Basic version, but the units are fitted with **special inverter fans and motors** to ensure low energy consumption and to operate on a wider envelope. The HT version can be supplied with BLN acoustic option only.

- **HPF (High Pressure Fans) version**: It has same equipment as Basic version, except that the units are equipped with **special inverter fans** (same as those used on HT version, but with a different regulation) driven by **EC motors** with **integrated electronic inverter**. HPF version provides external static pressure up to **120 Pa**. This version can be supplied with BLN acoustic option only.

In addition, **partial heat recovery option** is available:

- **Desuperheater**: All the versions can be supplied with plate type heat exchangers fitted, one on each refrigerant circuit, on the compressor discharge line to recover about **20 % of the total heat** rejected to the condensers.

Conformity with directives

The following applies to all the sizes and versions:

- Machine Directive: 2006/42/EC
- Electromagnetic Compatibility Directive: 2004/108/EC
- Pressure Equipment Directive: 2014/68/EU

Cabinet and structure

The unit cabinet and structure are made of heavy gauge galvanized steel coated with polyester powder based painting (RAL 7040). All parts of the structure are fastened totally with non-corrosive screws and bolts.

Compressors

Each unit is equipped with two compressors arranged in tandem.

Compressors are of hermetic scroll type and fitted with an electronic control system ensuring protection against high temperature and excessive load.

All compressors have direct-on-line starting and are mounted on rubber vibration isolators in order to minimize noise and vibration transmission.

Evaporator

Evaporators is of a brazed stainless steel plate type heat exchanger.

It is insulated with a 19 mm thick closed cell polyethylene foam material and is fitted with a film type electric heater on the external surface to prevent the unit from freezing at a low temperature (down to -18 °C) when the unit is off. Water connections are of a Male GAS Threaded type (2"1/2 diameter).

Condenser coils

The condenser coils are made of seamless copper tubes, arranged in staggered rows, mechanically expanded into corrugated aluminum fins.

For Cooling only version (CO version) condenser coils are of microchannel type, made of 100% aluminium (fins, tubes and headers) with the exception of pipe couplings which are in copper.

Condenser fans

For each size, all versions keep the same number of fans. Large diameter, direct drive axial type fans with asynchronous three-phase motors are used in all acoustic versions (S version) of SyScroll 85-135 Air.

Special inverter fans with electronic brushless type motors are used in SyScroll 85-135 Air HT and HPF.

On high pressure fans of HPF units, the external static pressure (≤ 120 Pa) can be adjusted on site to match the customer demand directly from the electronic control panel of the unit.

Fans are equipped with externally mounted nozzle profile housing which generates low sound levels.

Fan speed control

The speed of fans is controlled in order to operate at a low ambient temperature.

On units with standard axial fans, the accessory fan speed control, supplied as standard on S version, is of a pressure actuated stepless type with an electronic controller.

The pressure actuated stepless type fan speed controller can be supplied as optional on - version. It allows the units to operate in cooling mode at ambient temperature down to -14 °C.

On HT and HPF units with electronic axial fans, the pressure actuated stepless type fan speed control is supplied as standard, because these electronic fans are already equipped with an integrated fan speed control (fan speed range: 50 to 1200 rpm; ambient temperature limit: -18 °C (in cooling mode only)).

Refrigerant circuits

All the units are composed a single refrigerant circuit.

Each refrigerant circuit is equipped with liquid line and discharge line shutoff valves, filter-drier with solid core, sight glass and thermostatic expansion valve (electronic expansion valve can be supplied as an option).

Heat pump units (HP) are provided with 4-way reversing valve, suction accumulator and liquid receiver on the liquid line.

The functional diagram of each circuit is shown in the section "Refrigerant flow diagram".

Electrical board

Metal case, externally arranged at one end of the unit. Case for the board with IP44 protection rating, complete with grille for natural air ventilation of the box.

Control and safety devices

Each unit is fitted with the following devices:

Safety:

- Power disconnect switch with an emergency stop function.
- HP switch, set to 40.5 bar, automatic and manual reset to be reinitialized from the control panel.
- Water flow switch on the evaporator, protect the unit against low water flow operation.
- Antifreeze temperature sensor (set to +4 °C) on the evaporator.
- Safety valve on discharge line, set to 45 bar.

Control:

- HP and LP transducers.
- Evaporator water inlet temperature sensor.
- Evaporator water outlet temperature sensor (with an antifreeze function).
- Suction temperature sensor (in case of EEV option).
- Ambient air temperature sensor.
- Coil temperature sensor.

Electronic control

Units are supplied with the new microprocessor-based electronic control and management system ensuring the following functions:

- Management of the operation of compressors:
 - Power on/off
 - Anticycle management
 - Tandem unloading for high pressure or high compressor pressure ratio (integrated inside the curves of compressor operating limits).
- Chilled and hot water temperature regulation (control option on inlet water temperature RWT (P+I type) or outlet water temperature LWT (neutral band type) of the evaporator).
- Control of superheating on suction line (in case of EEV option).
- Evaporator antifreeze protection.
- Heat pump defrost control for automatic operation.
- Management of high and low pressure alarms.
- Management of the electronic expansion valves by means of EXV controller allowing optimized functions: cooling, heating, start-up and defrost (in case of EEV option).

- Management of external interlocks.
- Management of the remote control:
 - Unit power on/off
 - Summary alarm signals
- Remote signalling, by dry contacts:
 - Voltage presence
 - Compressors in operation
 - General Alarm
- Management of the hydro kit: start-up of pump, anti-freeze heater of external tank.

The unit controller can also clearly show all control parameters of the machine on the liquid crystal display, such as:

- Display of superheating value (in case of EEV option).
- Display of the temperature at the evaporator inlet and outlet.
- Display of the ambient air temperature.
- Display of discharge pressure and suction pressure.
- Display of the set point.
- Display of the various alarm and operation status:
 - Low / High pressure
 - Evaporator antifreeze
 - Flow switch signal for lack of water
 - Control of the compressor operating hours
 - Compressors in operation
 - Pump in operation and operating hours
 - Thermal protection of compressors
 - Thermal protection of fans
 - Faulty sensors

Standard equipment

- Set point timer/clock card.
- Pressure actuated fan speed control.
- Back light display.
- Digital pressure and temperature reading kit.
- High ambient pressure control.
- Sequence phase control.
- Control circuit transformer 400 V/230 V.
- Data logger.
- Power supply without neutral.
- Hour meter.
- Main switch.
- Refrigerant R410A.
- PED approval.
- Evaporator antifreeze electric heater.
- Compressor jacket (standard on S version).
- Compressor box.
- Water flow switch.

Optional hydro kits

On board mounted inside and remote hydrokits are available as optional. The on board hydro kits can be supplied with or without buffer tank while remote hydro kits (supplied loose for field installation) are always provided with internal tank.

- On board hydro kit without buffer tank has the following components:

- Single or double pump with low static pressure (100 kPa) or high static pressure (200 kPa),
- Expansion tank (18 litres for all models),
- Water filter option (supplied loose),
- Shut-off valves,
- Safety valve,
- Automatic air vent valve,
- Thermal insulation for pipes and water pump(s),
- The on board hydro kit with buffer tank has the following components:
 - Single or double pump with low static pressure (100 kPa) or high static pressure (200 kPa),
 - Buffer tank (205 l from 85 to 105 size, 320 l from 120 to 135 size),
 - Expansion tank (18 litres for all models),
 - Water filter option (supplied loose),
 - Shut-off valves,
 - Safety valve,
 - Automatic air vent valve,
 - Thermal insulation for pipes and water pump(s),
 - Electrical box,
 - Antifreeze electric heater inside buffer tank (electric heater for pipes is not supplied).

Factory installed options

- ModBus protocol kit for BMS.
- Lonwork protocol kit for BMS.
- Bacnet protocol kit for BMS.
- Compressors soft starter.
- Pressure actuated stepless fan speed controller for low ambient operation (-14 °C).
- Double set point.
- Power factor correction capacitors.
- Compressors overload protection.
- GSM.
- HP & LP manometers.
- Ecoating for Microchannel and AL/CU. Blue fins treatment for AL/CU.
- Condenser coils with copper fins.
- Coil grilles.
- Chiller grilles.
- Desuperheater.
- On board hydro kits 1P/2P with/witout tank.

Field-installed accessories

- Remote ON/OFF control.
- Remote keyboard panel.
- Master and slaves control, up to 4 units max.
- Spring anti-vibration.
- Water filter.
- Remote hydro kits with buffer tank, 1 or 2 low or high pressure pump(s), relevant accessories and with or without antifreeze heater:
 - 300 litres: sizes 85-105.
 - 500 litres: sizes 120-135.

Accessories & Options

SyScroll Air	Delivery	Abbreviation	Description & Benefit
Set point timer/Clock card	Std	CLK	To schedule 4 different interval time with different active water T setpoint.
Back light display	Std		User Display panel mounted. Suggested for outdoor installation.
Digital pressures and temperatures reading Kit	Std		Pressure Transducers & Sensors to show the Discharge and Suction pressure and temperature during running condition.
High pressure control on capacity	Std		Functions able to protect multistage circuit from High discharge pressure values. Circuit is partloaded whenever the Discharge pressure is too high to prevent HP tripping.
Sequence phases control	Std	PHC	It allows to check the correct sense R-S-T of electric supply phases for 400/3/50 units.
Control circuit transformer 400V/230V	Std	TRF	Voltage transformer to provide correctly the separated voltage to the auxiliary line.
Data logger	Std	DL	Record continuously the essential thermodynamic operating parameters, during the last hours. This facilitates debug and service activity on field.
Power supply without neutral	Std	3PH	Unit to be supplied with 400/3/50. No need of Neutral cable.
Hour meter	Std		Total running hours recorded for each compressors and for total unit. Also record of total scroll compressors starts.
Main switch	Std		Front operated switch-disconnector with direct mounted handle to cut the power Supply Line according CE standards.
Flow switch	Std	FS	Prevents the operation of the unit if the circulating chilled fluid is insufficient. It is recommended to install a flow switch to ensure the correct operation of the unit.
Antifreeze electric heater kit	Std	EEH	Electrical Heater protects the plate exchanger.
Compressor Jacket	Std SLN	CJ	Jacket for each compressors in order to reduce the sound of its.
Remote On/Off control	Accessory		It enables the operator to power on the unit when it is in standby mode, to display alarms and switch over cooling-heat pump. Maximum lenght: 50mt.
Remote keyboard panel	Accessory		Makes it possible to control the unit through the remote terminal, up to a maximum distance of 400mt of telephone cable.
Electronic expansion valves	Option	EEV	It is the device able to control the refrigerant flow on suction line through a stepper motor in order to keep the superheat as constant as possible.
Modbus protocol kit for BMS	Option	MBS	It permits the integration of the unit with BMS with Modbus protocol through RS485 port.
Lonwork protocol kit for BMS	Option	LON	It permits the integration of the unit with BMS with Lonwork Network.
Bacnet protocol kit for BMS	Option	BAC	It permits the integration of the unit with BMS with Bacnet protocol through RS485 port.
Interface Kit ethernet/webctrl pcos (Modbus & Bacnet already included)	Option		It permits the integration of the unit with BMS with Modbus or Bacnet protocol through Ethernet port (TCP/IP).
Softstarter for compressor	Option	SS	An electronic device that automatically starts up the compressors gradually. The starting current can be reduced by up to 40% of the direct on line value.
Low ambient kit (-14°C) (pressostatic stepless fan speed control)	Option	FSC	Electronic speed controllers are designed to control the speed of fan motors in Air Cooled Chiller and Heatpump. Fan Speed controlled by Condensing Pressure in cool mode or by Air Temp in heat mode. Using variable fan speed controllers offers following benefits in commercial refrigeration or air-conditioning applications High Efficiency, Low Noise level, Low air temperature in cool mode and High air temperature in heat mode.
Double set point	Option	DSP	Can manage two different applications (set point) selected by remote dry contact Circuit 1 and Circuit 2. On/Off or Part Load by remote Dry contact.
Power factor corrector capacitors	Option	PFC	The purpose of the power factor corrector capacitor is to minimize the input current distortion and make the current in phase with the voltage. Target is to keep Power Factor about 0.90 in any running condition.
Overload protection for compressors	Option	CP	The compressor is equipped with an amperometrical protection (overload protection) wired under the compressor contactor; this protection operates: a) if compressor's temperature is too high. b) if current's absorption is too high.

Accessories & Options (continued)

SyScroll Air	Delivery	Abbreviation	Description & Benefit
Sequencer for up to 4 chillers installation	Accessory	SEQ	It can easily pilot up to 4 units, chiller or heat pumps, belonging to the same family, fitted in parallel, 50 metres apart maximum.
Master and slave up to 4 chillers installation: CHILLERNET	Accessory		It is a network of chillers. They are hydraulically connected in parallel on the same installation. They are intended to work together as a single machine whose capacity equals the total amount of capacities. Up to 4 chillers of the same family can be connected together. One of these chillers is called MASTER, the others are SLAVE. The MASTER chiller will control all the other chillers.
GSM	Option	GSM	Makes it possible to check the working mode or the switching on/off of the unit via SMS. In case of any alarms, the unit sends an SMS to the user.
Automatic circuit breaker	Option	ACB	ACB is an automatically operated electrical switch designed to protect an electrical circuit from damage caused by overload or short circuit. Providing Magnetic and Thermal protection to Fan and Compressor motors.
Mechanical gauges kit (HP and LP manometers)	Option	KM	Pressure gauges that display the operating pressure in the high and low pressure sections of the refrigerant circuit.
E-coating MCHX	Option		It is a treatment for MCHX coil for medium level of pollution and for marine atmosphere.
Copper Fins	Option	CU/CU	The package heat exchanger finned coils in Cu/Cu can be used in places with a concentrations in the air of saline and highly aggressive agents: Not suitable in presence of sulphur-based agents.
Coil Guards	Option	CG	Grilles to protect the coils.
Chiller grilles	Option	KG	Grilles to protect unit avoiding possible intrusion into the unit.
Desuperheater	Option	D	Additional exchanger in order to recover 20% of capacity for Domestic Hot Water application.
Water pressure switch	Accessory		Mechanical water pressure switch to be mounted on the field installation on installation water piping to prevent very low Water Pressure.
Water filter	Accessory		Filter to remove impurities from the water supply.

Accessories are loosed and to install in the field. Options are mounted in factory.

EN 14511

Starting 2012 Campaign Eurovent Certification Company took decision to start certify only performances declared in according severe European Standard EN14511.

BEFORE 2012: GROSS PERFORMANCES

Before this date all capacity performances are declared, measured and certified by Eurovent, as GROSS performances. COOLING or HEATING CAPACITY was rated without taking in account the negative contribution of the heat exchanger Pressure Drop or the positive contribution of the Head Available prevalence in example.

POWER INPUT was rated as pure sum of all power input contribution from all motors fitted on the unit. Without taking in account the correction due to power spent to win the exchanger Pressure Drop in example.

AFTER 2012: NET PERFORMANCES

After this date all data are certified according EN14511. Mainly consequences in example on Water chiller or heatpump are: COOLING or HEATING CAPACITY is now rated taking in account the negative contribution of the heat exchanger Pressure Drop or the positive contribution of the Head Available prevalence in example. In case of Water to Water unit, in example, both exchanger Pressure Drop values are taken in account in the formula.

POWER INPUT is now rated as all power input contribution from all motors fitted on the unit taking in account also the correction due to power spent to win the exchanger Pressure Drop in example.

As an important consequence of these new rules setted by Eurovent is that EER, COP and ESEER are also affected by these correction. All efficiency index are now calculated, measured and certified according new rules setted by Eurovent according EN14511.

Air to water unit (non ducted outdoor):

	Indoor pump is an integral part		Indoor pump is not an integral part	
	ECC 2011 (gross)	EN14511	ECC 2011 (gross)	EN14511
Ph	$P_{h_m}^{(1)}$	$P_{h_m} - \frac{q_{wi} \Delta p_{e,wi}}{\eta_{pi}}$	P_{h_m}	$P_{h_m} + \frac{q_{wi} (-\Delta p_{i,wi})}{\eta_{pi}}$
Pc	$P_{C_m}^{(1)}$	$P_{C_m} + \frac{q_{wi} \Delta p_{e,wi}}{\eta_{pi}}$	P_{C_m}	$P_{C_m} - \frac{q_{wi} (-\Delta p_{i,wi})}{\eta_{pi}}$
Pe	$P_{e_m}^{(1)}$	$P_{e_m} - \frac{q_{wi} \Delta p_{e,wi}}{\eta_{pi}}$	P_{e_m}	$P_{e_m} + \frac{q_{wi} (-\Delta p_{i,wi})}{\eta_{pi}}$

(1) Measured with the indoor pump not running.

Where:

Ph = NET heating capacity.

Pc = NET cooling capacity.

Pe = electrical power input.

P_{h_m} = is the gross heat capacity, expressed in Watts.

P_{C_m} = is the gross cool capacity, expressed in Watts.

q_{wi} = is the nominal liquid flow rate.

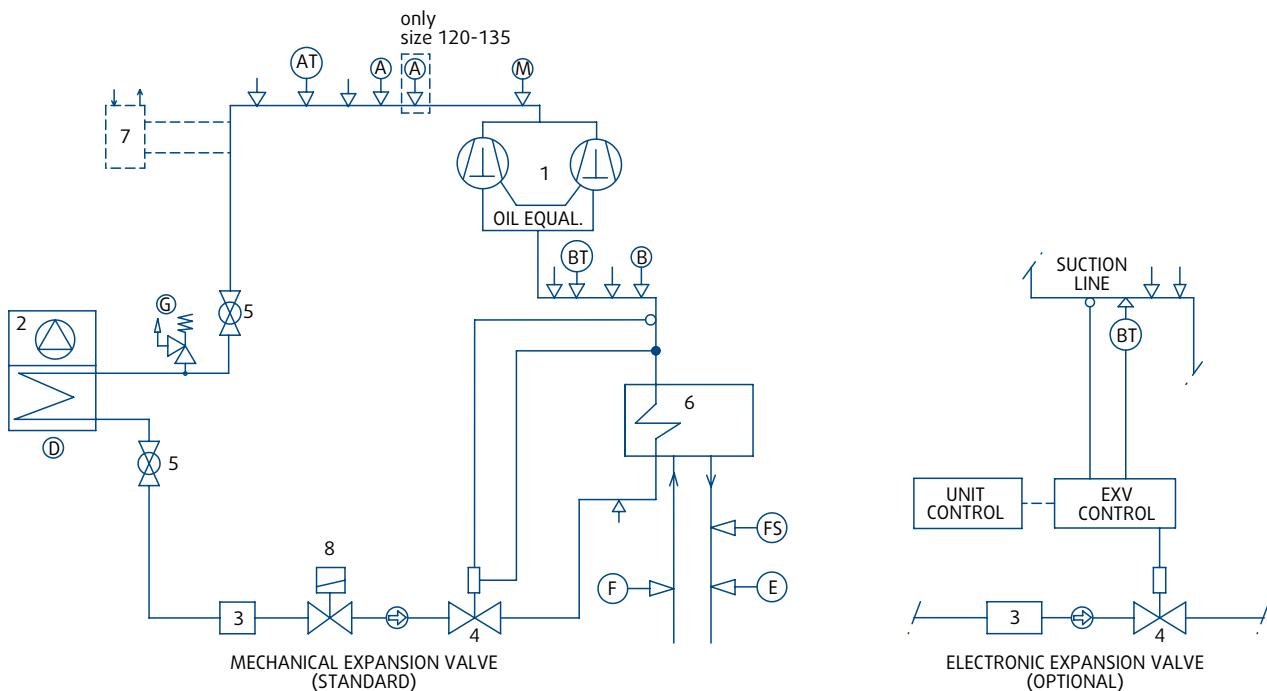

$\Delta_{pe,wi}$ = is the measured available external static pressure.

$\Delta_{pi,wi}$ = is the measured internal static pressure difference.

η_{pi} = is the efficiency of the pump.

Reference: *Guidelines for the declaration of performances according to EN14511 (available a copy upon request for Systemair customer).*

2400	0.943	1.038

System Water Volume

The minimum system water volume is calculated using [the minimum compressor running time \(1.5 minute for scroll compressor\)](#) and the [lower capacity step](#) (only one compressor running among the four compressors installed):

$$V = \frac{P \times t}{(n \times 25 \times \Delta T)}$$

Where V : Water volume (litre)
 P : Unit total cooling capacity (W)
 n : Number of compressor steps
 t : Compressor minimum running time (minute)
 ΔT : Evaporator temperature difference (°C)

With $t = 1.5$ minute, $\Delta T = 5$ °C and $n = 2$, the minimum system water volume is about $V = 6$ litres/kW.
